

## **BHTC – climate comfort in the truck cab**

### **Pleasant working place in motion**

#### **Lippstadt specialist presents innovative solutions for climate control in commercial vehicles**

*Lippstadt / Hannover, September 2006.* Premiere in Hannover: Behr-Hella Thermocontrol GmbH (BHTC), Lippstadt, present their product portfolio of climate controls for the commercial vehicle sector. For the first time the no 1 in European car climatisation shows climate control concepts that are tailored to the specific needs in the truck market.

The demand for more convenient, high quality climate comfort increases continuously, also for commercial vehicles. “With our innovative climate controls we answer this demand. Our products benefit from 25 years of experience in innovative concepts for climate control in automobiles, and that includes individual solutions for thermo-management in commercial vehicles”, says BHTC Technical Director, Friedrich Waldeyer.

The demand for such tailored solutions is increasing globally: “High quality air condition is a “must”, particularly in the emerging markets of Asia with their generally high temperatures,” adds Norbert Gruber, BHTC’s Managing Director. However, he also identifies further growth potential in the European and US-markets.

In Hannover, BHTC shows climate control concepts that put the driver at his working place into the focus. Climate comfort at limousine-level is offered by the climate control for the new Mercedes-Benz Sprinter with its several equipment packages and variable components. BHTC developed a climate control panel that meets the full spectrum of air conditioning requirements in a van just as it does in a comfortable minibus.

Further products in the BHTC portfolio are the climate control for the Mercedes-V-class, the Freightliner P2-series and the VW T5. The intelligent solar sensor ISOS and the basic solar sensor (BSS) complement this year's exhibits. All climate controls and sensors can be visited "live" at BHTC on IAA Nfz 2006.

Behr-Hella Thermocontrol GmbH (BHTC) at IAA NFZ 2006

Location: Hall 12 booth C51
